

Conbextra STD

Free Flow , Non Shrink Cementitious precision Grout

Uses

Conbextra STD is highly suitable for precision grouting of Structural Steel Column , Pipe Rack Foundations & Machine foundations subjected to static & light dynamic load .The product is also suitable for grouting of vertical & Horizontal Joints between precast building elements . Conbextra STD can also be used for grouting of Ground anchors

Advantages

- High effective bearing area – Result of Excellent Flow & Positive expansion
- High Early strength permits fast installation
- Excellent Cohesion

Description

Conbextra STD is supplied as a ready to use dry powder. The addition of a controlled amount of clean water produces a free flowing, non-shrink grout for gap thicknesses up to 150mm.

Conbextra STD is a blend of Portland cement, graded fillers and chemical additives which impart controlled expansion in the plastic state whilst minimising water demand. The low water demand ensures high early strength. The graded fillers are designed to assist uniform mixing and produce a consistent grout.

Technical support

An experienced technical advisory team is available to give technical service on request.

Properties

Compressive strength:IS 4031 70.06 & 100 mm cube

Age(days)	Compressive strength(N/mm ²)	
	Consistency	
	Flowable W/P 0.14	
	70.06	100mm cube
1	25	15
3	35	25
7	45	35
28	65	50

Flexural Strength :BS 4551, 1998

Age(days)	Flexural strength (N/mm ²)
	Consistency
	Flowable W/P 0.14
1	2.5
3	7.0
7	9.0
28	10.0

Tensile strength (W/P 0.14)	3.5 N/mm ² @ 28 days
Time for expansion (after mixing)	Start : 20 minutes Finish : 120 minutes
Freshwet density	Approx. 2260 kg/m ³ depending on actual consistency used.
Coefficient of thermal expansion	11 x 10 ⁻⁶ /°C
Unrestrained expansion (as per ASTM C827)	Upto 2% in plastic state enables to overcome shrinkage.
Pressure to restrain	0.004 N/mm ² approx.

Note: The typical physical properties given above are derived from testing in a controlled laboratory environment. Results derived from testing of field-applied samples may vary, depending on actual site conditions.

Specification Clauses

Performance specification

All grouting shown on the drawing must be carried out with a pre packed cement based product which is chloride free.

It shall be mixed with clean water to the required consistency. The grout must not bleed or segregate.

A positive volumetric expansion shall occur while the grout is plastic by means of gaseous system.

Conbextra STD

Typical detail of stanchion base plate

The compressive strength of the grout must exceed 45 N/mm² at 7 days and 60 N/mm² at 28 days.

The flexural strength of grout must exceed 9N/mm² @ 28 days.
The fresh wet density of the mixed grout must exceed 2150 kg/m³.

The storage, handling and placement of the grout must be in strict accordance with the manufacturer's instructions.

Application instructions

Preparation

Foundation surface

The substrate surface must be free from oil, grease or any loosely adherent material. If the concrete surface is defective or has laitence, it must be cut back to a sound base. Bolt holes and fixing pockets must be blown clean of any dirt or debris.

Pre-soaking

Several hours prior to placing, the concrete substrates should be saturated with fresh water.

Immediately before grouting takes place any free water should be removed with particular care being taken to blow out all bolt holes and pockets.

Base plate

It is essential that this is clean and free from oil, grease or scale. Air pressure relief holes should be provided to allow venting of any isolated high spots.

Levelling shims

If these are to be removed after the grout has hardened, they should be treated with a thin layer of grease.

Formwork

The formwork should be constructed to be leakproof. This can be achieved by using foam rubber strip or mastic sealant beneath the constructed formwork and between joints.

In some cases it is practical to use a sacrificial semi-dry sand and cement formwork. The formwork should include outlets for pre-soaking.

Unrestrained surface area

This must be kept to a minimum. Generally the gap width between the perimeter formwork and the plate edge should not exceed 150mm on the pouring side and 50mm on the opposite side. It is advisable, where practical, to have no gap at the flank sides.

Mixing and placing

Mixing

For best results a mechanically powered grout mixer should be used. When quantities up to 50kg are used, a heavy duty slow speed drill (400-500 rpm) fitted with a paddle is suitable. Larger quantities will require a heavy duty mixer.

To enable the grouting operation to be carried out continuously, it is essential that sufficient mixing capacity and labour are available. The use of a grout holding tank with provision to gently agitate the grout may be required.

Consistency of grout mix

The quantity of clean water required to be added to a 25kg bag to achieve the desired consistency is given below :

W/p Ratio (0.14) : 3.50 Liters

The selected water content should be accurately measured into the mixer. The total content of the Conbextra STD bag should be slowly added and continuous mixing should take place for 5 minutes. This will ensure that the grout has a smooth even consistency.

Placing

At 30°C place the grout within 20 minutes of mixing to gain full benefit of the expansion process.

Conbextra STD can be placed in thicknesses up to 150mm in a single pour when used as an underplate grout.

For thicker sections it is necessary to fill out Conbextra STD with well graded silt free aggregate to minimise heat build up. Typically a 10mm aggregate is suitable. 50 - 100% aggregate by weight of Conbextra STD can be added.

Conbextra STD

Additional information

Fosroc manufactures a wide range of products specifically designed for the repair and refurbishment of damaged reinforced concrete. This includes repair mortars, fluid microconcretes, chemical resistant epoxy mortars in addition to comprehensive package of protective coatings. In addition, a wide range of complementary products are available. This includes joint sealants, waterproofing membranes, grouts and anchors and specialised flooring materials.

*Separate data sheets are available on these products.
